1. SUBCELLULAR LOCATION: Integral membrane protein.

1. ALTERNATIVE PRODUCTS: 2 isoforms; 1 (shown here) and 2; are produced by alternative splicing.

1. TISSUE SPECIFICITY: PRIMARILY EXPRESSED IN BRAIN.

1. SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               G-protein
